

Test Description	Expected Outcome	Actual Outcome	Screenshot (If Expected does not equal Actual)
Try a course you don't qualify for: confirm "Enroll/Waitlist" are hidden and a clear prereq message shows; after marking the prereq done, the buttons appear.	"Enroll/Waitlist" are hidden, and a clear prereq message shows; after marking the prereq done, the buttons appear.	There is a clear message showing me that I don't meet the prereqs and prompting me to look for alternatives. There is no option for me to enroll in the session I don't meet requirements for.	
Double-click any blocked CTA area to see if buttons flash or appear briefly.	No buttons should flash or appear briefly	There is no flashing of hidden buttons or brief appearances.	
Complete the prereq in another tab, then return without refresh: does the gate clear?	The gate should clear after a refresh.	The gate was cleared after enrolling on a separate page and refreshing the original page.	
Have multiple unmet prereqs: do all list clearly (no partial unlock)?	All prereqs should be listed and shown as unsatisfied.	Microcourse #3 requires #1 and #2, but it only shows Microcourse #2 as a prerequisite. If I complete Microcourse #2, it unlocks Microcourse #3 without making me do Microcourse #1.	
Mark prereq "enrolled but not completed": verify it still blocks.	Prereq should still be marked as incomplete, and the course should still be blocked	The microcourse still shows that I need to complete it's prerequisite.	
Switch accounts mid-session: does the gate re-evaluate correctly?	The gate should change depending on the new account's status	The gate matches the completed prerequisites of the new account that was signed into.	

Enroll in a session: check you see a success message and a "Download .ics" button; open the file to confirm date/time/title look right.	Success message is shown, download button is shown, downloaded information is correct	I see a success message once I have enrolled, and this message shows the correct time, data, location, and title. It also shows correctly on the .ics download.	
Double-click Enroll rapidly: do you get duplicate enrollments or wrong alerts?	There should be no duplicate enrollments	Clicking multiple times rapidly still only allowed me to enroll once and decrease the seat number by 1. I did not get any alerts.	
Enroll when capacity = 1 and another test user grabs it at the same time (race): correct outcome + message?	Only one user should be enrolled, and the correct messages should be shown to each account.	Only one user was enrolled, and this was displayed correctly to both users.	
Refresh the page mid-enroll (F5): any half-state or ghost enrollment?	There should not be any half-state or ghost enrollment	There was no half-state or ghost enrollment, the enrollment occurred as expected.	
Open the .ics: check time zone (DST edge), title, and location are correct.	Time zone (DST edge), title, and location are correct.	All the times, titles, and locations were correct, and my timezone was correctly shown as Mountain Standard Time	
Try enrolling, then immediately cancel (if supported): does the .ics button disappear as it should?	The .ics button disappears after cancelling.	The .ics download button disappears immediately after unenrolling/cancelling	

Join a waitlist: make sure you see your position number (e.g., “#2”) and that it updates after others join/leave.	I see my position in the waitlist, and it updates after I get off the waitlist.	My position on the waitlist was correct, and when others left it was updated correctly.	
Join/leave waitlist from two different tabs: does position stay accurate after refresh?	The position is accurate on the waitlist	My position was accurate after refreshing on both tabs.	
Have others join ahead of you: does your number change correctly?	My number changes correctly when people join ahead of me	My number on the waitlist was accurate when others joined ahead of me.	
Capacity flips from 0→1: do you move off waitlist cleanly (no stuck “#1”)?	I move cleanly off of the waitlist	I did not get stuck on number 1, rather I was automatically enrolled in the microcourse.	
Rapidly click “Join Waitlist” multiple times: any duplicates?	There should not be any duplicates	I was only added once to the waitlist.	
Navigate away and back: does it still show the right position?	My position in the waitlist is still correct.	After navigating away to two different pages, my position was still correct.	
Attempt to book a session that overlaps one you already hold: see a conflict modal; click “Replace booking” to end up with exactly one session (or Cancel to keep things as they are).	I have the option to replace my previous booking or I can cancel.	The event with a time conflict shows me a time conflict message once I have enrolled in the other course. I can see other time options.	
Overlap by one minute at the boundary (e.g., 10:00–10:30 vs 10:30–11:00): is it treated consistently?	If there is an overlap, I should not be able to book both sessions; however, if there isn’t, I should have no conflict.	The time overlap is treated correctly with both a 1-minute overlap and times directly before and after each other.	

Same microcourse at two times: does the modal highlight the better non-overlapping option?	The non-overlapping option is highlighted	Yes, better times are displayed when they have an option for a different time.	
Start the swap, then close the modal or navigate away: no half-state (you should still have your original seat).	I still have my original seat.	I still have my original seat and there was no half-state.	
Two overlaps at once: does the modal list all conflicts clearly?	All conflicts are listed	Yes, both overlaps are listed.	
Perform swap during a capacity race: ends with exactly one confirmed seat or a clear failure with no loss.	I have either one seat or a failure message.	Yes, I had one clear, confirmed seat.	
Use filters (time, microcourse, text), open a detail page, go back: confirm your filtered view is still applied; try "Clear filters" to reset.	The filters persist while I open a details page, and are reset when "clear filters" is clicked	The filters still persisted after opening a detail page. They all clear when the clear filters button is clicked, and all available courses are shown again.	
Apply multiple filters, open details in a new tab, then return: filters still applied?	The filters should still be applied	The filters still persisted after opening the details in a new tab.	
Empty-result case: friendly message + "Clear filters" works?	The clear filters button is an option and works correctly.	The clear filters button was an option and cleared all filters instantly.	
Change device time (or test around DST boundary) and apply time window: results still correct?	The time window is still correct.	The time is still shown correctly (according to the changed time)	

Text search with partial words/case differences: behaves as expected?	Case differences are ignored and searches with partial words are found.	Partial words and phrases are still found, and case does not matter.	
Use browser Back/Forward: no filter reset or weird stale list?	Filters are not reset and there is no stale list.	The filters persist through browser back/forward, and there is no weird stale list.
